stock clearence operation using FEFO

AI implementation and analysis

stock inventory management

MISSION AND VISION

To create a smart and sustainable inventory management system. with the aid of AI. The system proposed is to compensate the lack of digitallize stock control implemantatin inside orbyte scosystem

WHY B-WARN CAN BE ESSENTIAL FOR ORBYTE

Orbyte already has a fully functioning internal business operation system such as human resource management ,and labour capital allocation. However, our team aims to address the blank in product management. In a successful company, giving the right people the right job is just one part of the equation, b-warn will help increase the smoothness of stock control by guiding the product flow

Outstanding Mangement

Effective Product Flow

Striving Business

RESEARCH & INNOVATION INITIATIVES

Driving advanced system intelligence through data-driven visibility, automated expiry tracking, transparent AI recommendations, and complete decision traceability.

- Financial visibility
- Expiry-based promotion suggestion
- Explainable recommendations
- Traceable decisions

How b-warn is build

Trigger

When stock approaching expiry while it is still unsold

Connected data

Connected to the current database to show remaining days and inventory

Decision logic

Uses First Expired First Out with the aid of AI decision promotion

Human approval.

promotion conetent must be approve by business owner before published

5.Visible outcome.

Item being promoted and being sold. Revenue and profits increases
